Systematic review definitions for acutely decompensated chronic diseases

Acute hypertensive presentations / severe hypertension: hypertensive emergency or hypertensive crises or SBP > 180 or DBP > 110.

Diabetic emergency: diabetic ketoacidosis or hyperosmolar hyperglycaemic state or severe hyperglycaemia as the reason for admission

HIV treatment failure: as per the reporting study's definition (see study characteristics table above).

Risk of Bias Assessment

Newcastle Ottawa Scale adapted for prevalence studies

Selection:

1. Representativeness of the sample:
 - a. Truly representative of the average in the target population. ** (all subjects or random sampling)
 - b. Somewhat representative of the average in the target group. * (non-random sampling)
 - c. Selected group of users/convenience sample.
 - d. No description of the derivation of the included subjects.
2. Sample size:
 - a. Justified and satisfactory (including sample size calculation). *
 - b. Not justified.
 - c. No information provided
3. Non-respondents:
 - a. Proportion of target sample recruited attains pre-specified target or basic summary of non-respondent characteristics in sampling frame recorded. *
 - b. Unsatisfactory recruitment rate, no summary data on non-respondents.
 - c. No information provided

Comparability:

1. Comparability of subjects in different outcome groups on the basis of design or analysis. Confounding factors controlled.
 - a. Data/ results adjusted for relevant predictors/risk factors/confounders e.g. age, sex, etc. **
 - b. Data/results not adjusted for all relevant confounders/risk factors/information not provided.

Outcome:

1. Assessment of outcome:
 - a. Independent blind assessment using objective validated methods. **
 - b. Unblinded assessment using objective validated methods. **
 - c. Used non-standard or non-validated methods with gold standard. *
 - d. No description/non-standard methods used.
2. Statistical test:
 - a. Statistical test used to analyse the data clearly described, appropriate and measures of association presented including confidence intervals and probability level (p value). *
 - b. Statistical test not appropriate, not described or incomplete.

Scoring: 7-9 high quality, 4-6 high risk, 0-3 very high risk of bias.

Risk of bias findings from the Newcastle Ottawa Scale

Forest plots and assessment of heterogeneity

HIV

HIV

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

HIV by country-level HIV prevalence

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

HIV by region

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

HIV by country-level economic status

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

HIV by risk of bias

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

HIV sensitivity analysis

Very high risk studies removed from the meta-analysis in this sensitivity analysis:

HIV

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

HIV funnel plot

Egger's Test of H0: no small-study effects P = 0.18

Under-treated/undiagnosed HIV & HIV status

HIV treatment failure

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

Unknown HIV status (on admission)

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

New HIV diagnoses

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

Unknown HIV status (on discharge)

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

HIV treatment non-compliance among patients on ART

NOTE: Weights are from random-effects model

Hypertension

Hypertension

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

Hypertension by region

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

Hypertension by country-level economic status

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

Hypertension by risk of bias

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

Hypertension sensitivity analysis

Sensitivity analysis excluding studies with very high risk of bias.

Hypertension

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

Hypertension funnel plot

Egger's Test of H0: no small-study effects P = 0.04

Hypertensive presentations

Acute hypertensive presentations

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

Acute hypertensive presentations by region

Diabetes

Diabetes

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

Diabetes by region

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

Diabetes by country-level economic status

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

Diabetes by risk of bias

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

Diabetes sensitivity analysis

Sensitivity analysis excluding studies with very high risk of bias.

Diabetes

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

Diabetes funnel plot

Egger's Test of H0: no small-study effects P = 0.91

Diabetic emergencies

Diabetic emergencies

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

Heart failure

Heart failure

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

Heart failure by region

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

Heart failure by country-level economic status

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

Heart failure by risk of bias

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

Heart failure sensitivity analysis

Very high risk studies removed from the meta-analysis in this sensitivity analysis:

Heart failure

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

Heart failure funnel plot

Test of H0: no small-study effects P = 0.61

Hypertensive heart disease

Prevalence of Hypertensive heart disease

Stroke

Stroke

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

Stroke by region

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

Stroke by country-level economic status

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

Stroke by risk of bias

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

Stroke sensitivity analysis

Very high risk studies removed from the meta-analysis in this sensitivity analysis

Stroke

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

Stroke funnel plot

Egger's Test of H0: no small-study effects P = 0.58

Acute coronary syndromes

Acute coronary syndromes

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

Chronic kidney disease

Chronic kidney disease

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

Acute kidney injury

Acute kidney injury

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

Renal impairment (unclassified)

Renal impairment (unclassified)

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

Figure shows prevalence of renal impairment that was not classified as either acute or chronic renal disease.

Chronic liver disease

Chronic liver disease

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

Chronic obstructive pulmonary disease

Chronic obstructive pulmonary disease (COPD)

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

This figure shows the prevalence of patients with acute exacerbations of COPD in medical wards and emergency departments.

Obesity

Obesity

Tobacco smokers

Tobacco smokers

NOTE: Weights and between-subgroup heterogeneity test are from random-effects model

Alcohol use

Background alcohol use

Alcohol use

Figure shows prevalence of alcohol use among medically admitted adult patients

Admission due to alcohol use

Admission due to alcohol use

Metaregression table

Table 1. Univariable meta-regression results. Meta-regression analyses exploring the association between population and study factors and the prevalence of conditions where >10 estimates were available.

Barak 2019 ¹⁰	Botswana	Prospective cross-sectional	Medical ward	51 (34-71)*	HIV: 983/2316 (42.4%)	HIV + HTN: 140/983 (14.2%) HIV + DM: 78/983 (7.9%) HIV + CLD: 80/983 (8.1%) HIV + Heart disease: 44/983 (4.5%)	140/2316 (6.0%) 78/2316 (3.4%) 80/2316 (3.5%) 44/2316 (1.9%)
Perry 2017 ¹¹	Botswana	Prospective cohort	Medical ward	48	HIV: 463/972 (47.6%)	HIV + HTN: 6/463 (1.3%) HIV + DM: 78/463 (16.8%) HIV + Stroke: 9/463 (1.9%) HIV + HF: 10/463 (2.2%)	6/972 (0.6%) 78/972 (8.0%) 9/972 (0.9%) 10/972 (1.0%)
Kingery 2017 ¹²	Tanzania	Prospective cohort	Medical ward	Not reported	HF: 145/588 (24.7%)	HF + HTN: 61/588 (10.4%) HF + DM: 14/588 (2.4%)	61/588 (10.4%) 14/588 (2.4%)
Meintjes 2015 ¹³	South Africa	Prospective cohort	Medical ward	Not reported	HIV: 609/1013 (60.1%)	HIV + NCD: 22/609 (3.6%)	22/1013 (2.2%)

CLD: Chronic lung disease; CKD: Chronic kidney disease; MI: Myocardial infarction; HF: heart failure; HTN: hypertension; HIV: human immunodeficiency virus; NCD = non-communicable disease; VTE = venous thrombo-embolism.

Data collection tool

List of data collected:

1. Citation details: authorship, year of publication, title and journal.
2. Year and duration of study.
3. Study location: site, country, hospital setting (emergency department or medical ward).
4. Study design.
5. Sample size and statistical considerations.
6. Population characteristics (of the unselected population): age (median and inter-quartile range or mean and standard deviation), proportion males : females.
7. Prevalence outcomes for each condition (see search strategy) as:
 - 1) background condition prevalence
 - 2) prevalence of decompensated disease state.

The following data were collected:

- definition of outcome
- diagnostic methods used
- numerator, denominator and prevalence

8. Newcastle Ottawa Scale for risk of bias assessment.
